

Little Medical School STEM NEW Classes Coming to St. Clement!

LMS offers STEM activity-based classes where we strive to inspire the next generation of Healthcare Heroes! We are offering two 6-week programs beginning in January and March 2025.

Marine Biology School - January

Students will learn all about the jobs of a marine biologist and the tools they use to do their job. They will discover all aspects of the ocean, including water pressure, motions of waves, and salt water. Students will identify various types of marine animals, including the differences between vertebrates and invertebrates.

Sea Turtle Explorers - March

Our program gives students a hands-on, dynamic introduction to sea turtles. Each participant will become the caretaker of a plush sea turtle, conduct health checks, explore the diversity of sea turtle species, and join a team effort to role play a rescue and release a Leatherback sea turtle back into the wild.
